DETAILED ACTION

1. Claims 1-8 are presented for examination.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
3. Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Information Disclosure Statement

4. The information disclosure statement (IDS) submitted on 1/24/2007 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

5. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Kitahara (USPN 7,095,582).

RE claims 1 and 5, Kitahara discloses an apparatus for reproducing recorded signal (***see figure 2 and column 4 lines 28-32, 38-42***) comprising: a head assembly including a plurality of reproducing heads for each track, the reproducing heads deviating from each other in a track width direction (***see figure 4 and column 5 lines 12-16, column 6 lines 51-61; i.e., the head unit including reproducing heads RH1-Rh8 and each reproducing head deviating from each other in the track width direction B***); a driving device for driving the head assembly in the track width direction (***see figure 2 and column 9 lines 33-40; i.e., the head unit driver 17 moves the head unit in track width direction B***); a reproduction signal processor for detecting track identification information of a traced track according to a reproduction signal obtained by the plurality of reproduction heads for each of the reproducing heads (***see figure 2 and column 9 lines 20-25; i.e., the reproducing signal processor 15***), wherein the driving device drives the head assembly in the track width direction using

the track identification information and the plurality of reproducing heads trace a target track (*see column 9 lines 33-40, 58-67 and column 10 lines 1-8*).

Allowable Subject Matter

8. Claims 2-4, 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
